

# SCHOTT Termofrost™

– the clear choice for cold and frozen display

# Doors at the forefront

*SCHOTT Termofrost™ glass doors are ideal for all types of cold rooms for the display and storage of chilled products such as beverages, dairy products and flowers, down to +2°C, and frozen goods down to -25°C.*

*Self-closing, condensation-free door systems are essential for displaying goods at the right temperature and at the lowest possible energy cost.*

*The vertical lighting shows the products at their very best, which contributes to increased sales.*

*Toughened glass and anodized aluminium give our systems lasting durability and aesthetic appeal.*

## **Model description**

T = Standard height, 1601 mm  
S = Super height, 1801 mm  
R = Roll In, 1903 mm

Three door widths:  
660 mm and 760 mm  
Maxi Twin 2x450 mm

NT = Normal Temperature, cold display, down to +2°C  
LT = Low Temperature, freezer display, down to -25°C

T66 NT, 7-Eleven, Arlanda. Elegant, energy-efficient and effective display with self-closing doors.

**T76 NT, blood bank, Huddinge Hospital.** Our glass doors meet the highest demands on quality.

There are many application areas for our glass doors; for example, storage of blood bags in a blood bank.

**T66 LT, OK/Q8 Huddinge.** Optimal visibility increases sales.

## Selling displays requiring minimal space

With twin narrow doors and no centre mullion, Maxi Twin is a glass door system that makes optimal use of retail space, providing maximum cold storage space and display area. Narrow doors mean minimal opening

radius in front of the display, which is a definite advantage in small shops such as convenience stores and petrol stations. Maxi Twin is module-adapted for 45 cm dairy containers, which simplifies handling.

**T45 NT Maxi Twin.** Ideal cold display doors for smaller shops.

R76 NT for Interflora, Täby town centre. Toughened glass for maximum safety in all our glass doors.

## Large display areas and easy handling

With Roll In doors, you can create a sales environment that enables unique display of chilled food products, beverages or flowers.

Roll In glass doors extend right to the floor, giving a larger display area. The doors can be mounted with or without a low threshold, which facilitates handling of e.g. heavy containers.

Roll In doors are practical for smaller cold rooms behind which there are no storage areas.

Roll In doors mounted on a chilled flower display unit, where attractive lighting shows the flowers at their best.

## The details make the difference

Doors can be equipped with locks.

Elegant and sturdy handle design.

Choose a low threshold or no threshold at all – stocking and cleaning have never been easier!

To facilitate stocking and cleaning, the doors are equipped with doorstops.

Frame heating can be switched on and off manually.

# Flexi Shelf Pro – the complete shelving system

Flexi Shelf Pro – an appealing and flexible shelving system for chilled and frozen goods.

Flexi Shelf Pro helps create an attractive, logical display and simplifies stocking and inventory management.

## Many advantages with Flexi Shelf Pro

- A complete system with accessories such as front stops, price marking strips, dividers and pin-packs.
- Wire shelves mounted with adjustable consoles provide the desired angle, enabling gravity feed that ensures a constantly replenished cold or freezer display front.
- The shelving system can be combined with its predecessor, Flexi Shelf.

## Shelving systems that make life easier

Flexi Shelf Pro is stocked from the rear, which guarantees first in, first out. In the cold room, the need for stocking is noticed immediately and it is easier to maintain the display front.

An article code list at the rear of the shelves simplifies replenishing.

The shelving system has only two uprights, which are mounted at the front. This makes it easier to clean and rearrange the shelves.

One good reason to choose Flexi Shelf Pro is that all the components are easy to adapt for all types of goods.

Regardless of size, all goods fit in our flexible shelving system.

Stocking and cleaning – fast and easy when the shelves are front-mounted.

VISIBILITY + TECHNOLOGY =  
*visiology*

**SCHOTT**  
glass made of ideas

## From float glass to customer benefit

*SCHOTT Termofrost is the only supplier to the commercial refrigeration industry that covers the entire manufacturing process – from cutting, grinding, tempering and coating for heated glass – to the assembly of the complete door and frame system.*

### **SCHOTT Termofrost – your reliable partner**

Investing in glass door and frame systems from SCHOTT Termofrost gives you a lot of advantages, such as:

- Toughened glass for maximum safety
- A 5-year guarantee against condensation between glass panels
- The glass doors are dimensioned and tested to ensure problem-free usage for 10 years, which means that they can be opened at least 350,000 times.
- All products are CE-marked and approved by SEMKO.

### **Reduce your energy consumption by half with ECO-S!**

ECO-S (Energy Control System) is an energy-saving modular system for regulation of electrical heating in our glass doors. The system monitors ambient temperature and relative humidity and automatically calculates the minimum heat required to keep doors and frames free of condensation. With SCHOTT Termofrost's ECO-S, you can reduce energy consumption significantly!

ECO-S gives you:

- Savings of as much as 50% on energy consumption with our door and frame systems
- A maintenance-free system that automatically regulates heating of the frame, door frame and glass to prevent condensation
- Simple installation and calibration
- Small, efficient units that require minimal space
- Automatic compensation for voltage variations

ECO-S is available exclusively with SCHOTT Termofrost™ door and frame systems and can be either integrated into new frames during fabrication, or installed as external equipment in existing cold rooms.

*Our technically advanced production systems, rigorous quality control and skilled, dedicated personnel enable SCHOTT Termofrost to deliver first-class products.*

*Continuous improvements realized through ongoing research and development contribute to one of our winning concepts – visiology\*.*

\*) VISIOLGY: cutting-edge knowledge that encompasses **visibility** and the **technology** for production, research, testing and development, in areas where these features are key success factors, such as the market for commercial refrigeration.

## SCHOTT Termofrost meets all your needs in commercial refrigeration – worldwide!

With production units in Europe, the USA, South America and Asia and sales offices throughout the world, SCHOTT Termofrost is the only supplier in the industry that offers a global network.

Visit our website to find your nearest SCHOTT Termofrost representative. Of course, you are also welcome to contact us directly, should you have any questions.
